

Establishing the Data

Glimpse of the data

```
In [2]: import pandas as pd
```

```
In [3]: df = pd.read_csv("data.csv")  
df.head()
```

```
Out[3]:
```

	tech_company	benefits	workplace_resources	mh_employer_discussion	mh_coworker
0	Yes	No	I don't know		No
1	Yes	Yes	No		No
2	Yes	I don't know	No		Yes
3	Yes	Yes	I don't know		Yes
4	Yes	Yes	No		No

How to get the data

This data can be obtained from Mendeley Data's website:

<https://data.mendeley.com/datasets/mmnzx4w8cg/1>.

Background information

This data was produced by Open Sourcing Mental Illness (OSMI). From 2017 to 2021, OSMI asked a series of questions to individuals specifically in the technology industry. The questionnaire is given below in the order of the columns in the data table:

- Is your employer primarily a tech company/organization?
- Does your employer provide mental health benefits as part of healthcare coverage?
- Does your employer offer resources to learn more about mental health disorders and options for seeking help?

- Have you ever discussed your mental health with your employer?
- Have you ever discussed your mental health with coworkers?
- Do you have medical coverage (private insurance or state-provided) that includes treatment of mental health disorders?
- Do you currently have a mental health disorder?
- How willing would you be to share with friends and family that you have a mental illness?
- What is your age?
- What is your gender?
- What country do you live in?

Column information

```
In [4]: COLS = pd.DataFrame(index=df.columns)
COLS.index.name = 'columns'
COLS['n_unique'] = df.nunique()
COLS['dtypes'] = df.dtypes
```

```
In [5]: COLS
```

```
Out[5]:
```

	n_unique	dtypes
