

# The Human Cost of Innovation

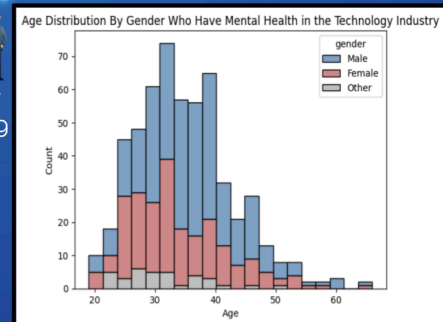

Final product

# -The Human Cost of Innovation-

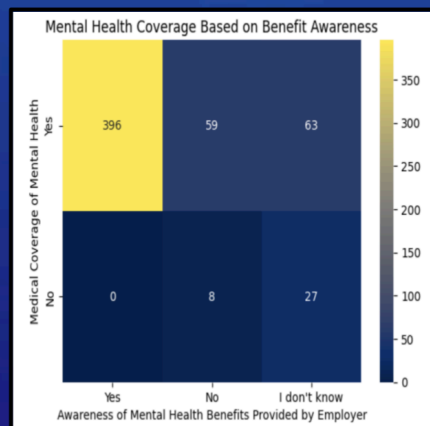

The technology industry needs to act to provide a stigma-free environment and accessible resources to tackle employees' mental health challenges.

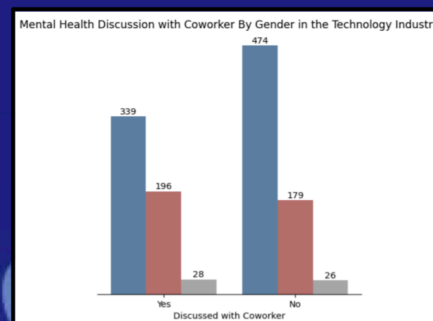

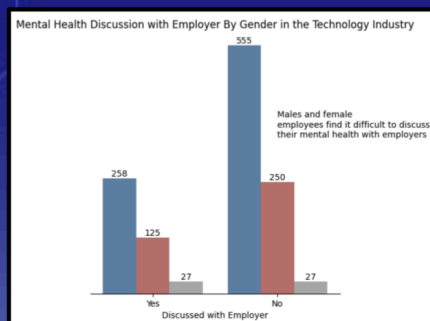

The study, conducted by Open Sourcing Mental Illness (OSMI), shows mental health across all genders and ages.

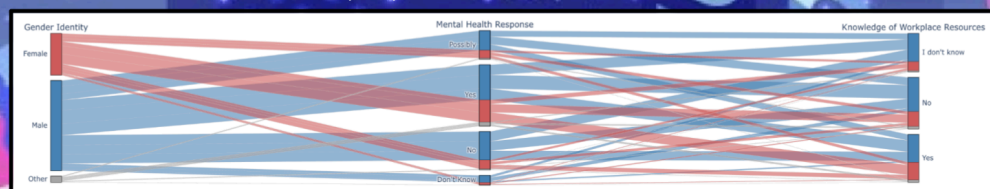

All workers who are aware of mental health benefits provided by their employer have mental health coverage. Many workers have coverage even if they do not know about the benefits.

Because males are overrepresented in the study, the values corresponding to males may be skewed compared to other gender groups.

When it comes to discussing mental health concerns with others in the workplace, employees are more reluctant to reach out to employers than to coworkers.

Majority of workers in the technology industry are not aware of resources available for mental health. Addressing mental health challenges is critical and necessary for fostering a productive workforce.

This infographic aims to convey to the audience that mental health challenges are evident in the technology industry and urges companies to respond by creating a

stigma-free workplace and providing meaningful resources. Blue colors represent male, red colors for female, and grey for other genders.
